Lawn Mowing

Cause a well mowed lawn looks spectacular but seriously it does actually help keep a lawn healthy. Apart from the fact that a well cut green lawn is good Feng Shui it keeps the grass plants in a vegetative stage by preventing seed formation. The routine partial removal of grass leaves also is a trigger for the production of tillers and rhizomes, resulting in denser turf. Higher mowing heights promote the development of deeper root systems. This is important in Perth, Western Australia as the grass is able to cope with the hot summers. It is also critical to never remove more than 1/3 of the blade length at one time.

A common misconception is that dumping lawn clippings on your garden beds is good. Lawn clippings in fact make poor mulch because they decay and form a barrier that's impenetrable to water and inhibits air movement. This can lead to fungus breeding. Over time as the clippings compost, they overheat the soil and draw out precious nutrients that plants need to survive. A better use of your lawn clippings is to add them to a compost heap. Our lawn mowing service price includes taking away the clippings, edging and whippy snipping.

- We provide lawn mowing services and lawn care to most suburbs North of the River (see [list](#)) . Our service is second to none, our prices are competitive and include taking the clippings away and edging the lawn at no extra cost to you our valued customer.
- We also offer ride-on mowing , slashing of vacant blocks and fire-breaks which by council regulation should be done before the end of the month of November.

3. Lawn Care

A well maintained and healthy lawn has the following benefits:

- Traps dust and dirt keeping the air around your dwelling cleaner
- Absorbs noises making the homes and neighborhood's quieter
- Traps sunlight reducing the temperature around the house
- Absorbs carbon dioxide and produces oxygen
- Reduces soil erosion
- Soothes the soul

Keeping a lawn looking lush and healthy is easy if you establish a regular routine of mowing, fertilizing and watering.

Regular Mowing

[Regular mowing](#) will keep the lawn even and attractive and will improve the density of the turf. A common mistake is to mow the lawn too short or infrequently. In WA it is important to leave more blade on the grass plant as it encourages a deeper root system, promoting drought resistant grass. It is also important to only ever remove 1/3 of the leaf at one cutting. Regular mowing also reduces the likelihood of weeds getting established. Generally you should mow your lawn during summer every 14 days and in winter about every 30 days but obviously this is dependent on varying factors.

Fertilizing

Turf consists of thousands of grass plants and like any plant it requires food. It is important to fertilize the lawn especially at the start of spring when the lawn comes out of a dormant phase. When new growth begins, the grass need more nutrients. It is also a good idea to fertilize the lawn every 2-3 months to keep a lawn green , lush and healthy. A healthy lawn also is able fight diseases and weeds better. Mowers that can mulch are beneficial to your lawn as they put the nutrients back into the lawn, resulting in less fertilizer having to be used.

Watering

Watering your lawn is as obvious as it is important. The most efficient means of watering a lawn is by installing an irrigation system. Hand watering and and hose sprinkler's usually leads to over-watering some areas and under-watering other areas. Over watering the lawn can lead to large water bill and an unhealthy lawn. If a lawn gets too much water it becomes weak and is easily damaged. The roots also struggle to get oxygen needed for photosynthesis and can start too rot. The grass becomes more susceptible to diseases. Lack of water will cause the grass to wither and die. With the additional burden of water restrictions we have placed on us in Australia it is wise to invest in an automatic or semi-automatic [reticulation system](#).

Top Dressing

Top dressing can be used to level indentations in the lawn (car parking in same spot) and also to enrich the soil by adding special nutrients eg. reduce the reliance on the use of wetting agents for instance. Be sure to fertilize two weeks prior to top dressing the lawn.

Malaga Gardening & Mowing is able to provide you with a complete lawn care service in Perth, Western Australia. Our lawn mowing prices are very competitive and we can assist you in keeping your verge and property looking its best, be it commercial or residential. We are not just a lawn mowing business so we can offer you other services like gardening or tree pruning / hedging. We can fix your retic problems and even install new reticulation if required.
