

Jim Russell Roofing Services

About us

Jim Russell Roofing Services have been providing exceptional roof restorations, repairs and maintenance services to residential and commercial buildings throughout the greater region of Perth for over two decades.

We specialise in all aspects of the roofing industry, particularly all types of roof repair works including roof restoration, ridge capping, lead apron flashings, colorbond repairs, guttering and down pipes, chimney removals and repairs, valley flashings and whirly bird installations.

We also undertake roof inspections and prepare roof reports for all major insurance companies and builders.

We are a Trade Partner of Claim Central a major insurance builder in Australia, and also sub-contractor to Barclays Building Services, Pattersons Insurerbuild and many other insurance builders and companies.

Our company ethos is based on the belief that our customers' needs are of utmost importance — we are committed to meeting those needs — as a result, a high percentage of our business is from repeat customers and their referrals.

We are constantly expanding our knowledge and expertise through new challenges and are committed to staying up to date with the latest products, technology and methods.

We guarantee all work carried out — we pride ourselves on willingly staking our reputation alongside our name and workmanship!

Call Jim Russell Roofing Services for any or all of your roofing needs and you wont be disappointed. We welcome and appreciate the opportunity to earn your trust while providing to you the best service in the industry!

Why Choose Jim Russell Roofing

Our company is built on the belief that our customers' needs are of the utmost importance and we are committed to meeting those needs.

We guarantee all works carried out — we pride ourselves on willingly staking our reputation alongside our name and workmanship

Roof Repairs

Jim Russell Roofing Services can provide you with any type of roof repair work needed to make your roof wind proof, watertight and secure from the elements which could save you a lot of grief in the long run.

Roof Restoration

When looking for roof restoration, we provide a service second to none. We remove and replace all damaged roof tiles, we remove any loose pointing, re-bed ridge capping where necessary, scrape away any debris on ridge caps in preparation for re-point works, the ridge cappings are then re-pointed with flexible roof compound with the colour to best match the existing roof. The roof is then power washed to remove moss and dirt from the roof tiles. The roof is then coated with a shield coat bonding agent, once dry a two coat system of roof bond water based acrylic paint is applied. A 10-year guarantee is given where all of the roof has been restored in this way.

Ridge Capping

Keeping your ridge capping in good condition is very important as this is one of the points on your roof that are susceptible to severe winds. If ridge caps are cracked and loose the wind can lift them easily into the air and when they fall back to earth this is when they can damage roof tiles, pergola sheets skylights, solar panels and solar hot water systems. The new type of roof compound used today can easily be applied to make your ridge cappings stick like super glue and give you peace of mind.

Maintanance

We have extensive experience in all manner of roofing repair work that you may need to keep your roof wind proof, watertight and secure from the elements.

Keeping your roof in good condition is one of the most important aspects of home maintenance.

Regular maintenance and making necessary repairs quickly can save you a lot of time, money and hassle in the long run.

Lead Apron Flashings

We have many years experience removing old flashings and installing new flashings. During the hail storms of March 2010 many lead flashings were severely damaged and were replaced by Jim Russell Roofing Services. The lead flashings can also split due to the heat as they have no expansion — this then allows water penetration internally at these points which can be costly if not rectified quickly.

Colorbond Repairs

On colorbond metal roofs most leaks are caused by flashings installed incorrectly and where the seals have perished on soil pipes, air vents, TV antennas and air conditioner units. Jim Russell Roofing Services has many years experience in finding and fixing these problems.

Roof Inspections and Reports

We provide comprehensive roofing inspections and reports for all major insurance companies, and are a proud trade partner of Claim Central, one of Australia's leading insurance building companies. We are also sub-contractors to Barclays Building Services, Pattersons Insurerbuild and many other insurance builders and construction companies.

Guttering and Down Pipes

Many roof leaks are caused due to non-maintenance of gutters and down pipes. It doesn't take much debris to block the mouth of downpipes and when this happens most gutters back flow into the eaves areas. Jim Russell Roofing Services can provide a service for cleaning gutters and down pipes, removal and renewal of gutters and downpipes and gutter guard installation.

Valley Flashings

Many roof valley flashings nowadays just cant cope with the volume of water that Perth receives during storm season. If the valleys become blocked by debris the rain water can easily be deflected directly into the loft area in large volumes. Jim Russell Roofing Services can supply and fix all new zinkalume valley flashings to suit your property.

Chimney Removals and Repairs

We have many years experience in chimney removals and repairs. Many old chimneys can become very unstable due to extreme weather conditions and can cause severe damage internally. Jim Russell Roofing Services can also provide an expert chimney inspection service to all.

Whirly Bird Installations

Jim Russell Roofing Services have several years experience in installing whirly birds, and can assess and advise you on the type and number of whirly birds require for your home or building.
