

## ARB Lawns and Gardens-Lawn Cutting & Garden Maintenance-Newton

### How to Make a Lush Lawn

*As a homeowner, a well maintained lawn is your pride. There more to just watering the plants, shrubs and grasses in the garden to make it look good. When it comes to lawn cutting, there are essential maintenance needs for your grass.*

Although every yard is different from all other yards, the lawn cutting guides for them all generally is the same. Here are some practical tips to make a good plan in undertaking Lawn Cutting.

#### **Blade Height**

Set your blade at the mid level height. If the grass was trimmed too low it will make them scorch under the sun. If you leave the grass too long, it will be more difficult to cut on your next mowing.

#### **Create a Pattern**

You need to incorporate pattern to know you have covered all areas of the garden. The best pattern is in straight rows to achieve evenly trimmed rows with no spots left behind

#### **Keep an Eye on the Catching Bag**

Remember to check the clipping bag of your mower so it doesn't get full. Grass clumps may fall back to mowed rows and the part where the clumps fell may die.

#### **Right Timing is the Key to Lawn Cutting**

You do not want to waste your time and effort, materials and money so know when to adequately mow your low. The best time to Lawn Cutting and mowing your grass is when the day is fine and dry.
