

Locksmith Services Pty Ltd- Locksmith Services - Frankston

Automotive Locksmith Products & Services

Locksmith Services Pty Ltd strives to be your best choice for Automotive locksmithing in the Frankston and Mornington Peninsula area. They continually upgrade their equipment and automotive technician training to ensure they are able to meet all your automotive lock enquiries.

Automotive security has changed dramatically in the last seventeen years. They have gone from the era when there were only 2000+ key combinations used for every car of the largest vehicle manufacturer, to transponder controlled ignition systems, that change electronic codes each time you start your car. From the 30's to the 60's it was somewhat common that you might know someone whose car key also fit your car. Today just to obtain a duplicate key for your car, can be difficult and expensive.

Locksmith Services have two factories able to cater to in-house vehicle lock repairs be it from a replacement door lock to replacing your ignition lock our in-house technicians are able to cater to all your needs. Their in-house technicians can program factory supplied transponder keys into your vehicle either by appointment or while you wait.

Automotive Lock outs and lost Keys- Locksmiths

Locksmith Services has a fleet of fully equipped vehicles to come to you for your automotive requirement. They are able to open your vehicle when keys are accidentally locked inside to supplying and programming replacement keys that have been lost. Locksmith Services have the most up to date equipment and trained technicians to cater to any of your Automotive requirements.

Replacement Transponder Keys

What is a Transponder key?

Transponder keys are automotive ignition keys with signal-emitting circuits built inside.

When the key is turned in the ignition cylinder, the car's computer transmits a radio signal to the transponder circuit. The circuit has no battery; it is energized by the radio signal itself. The circuit typically has a computer chip that is programmed to respond by sending a coded signal back to the car's computer. If the circuit does not respond or if the code is incorrect, the engine will not start. Many cars immobilize if the wrong key is used by intruders. Transponder keys successfully protect cars from theft in two ways: forcing the ignition cylinder won't start the car, and the keys are difficult to duplicate. This is why transponder keys have become standard in modern cars and help decrease car theft.

Locksmith Services can duplicate most Transponder Car Keys for much less than the cost of an original from your dealership, they can also supply factory and after market remotes for your vehicle.
