

## Clear Sighted Window Cleaning- Window Cleaners - Paddington

### Helpful Window Cleaning Tips

Most of us can admit we do not clean our windows enough. It is advised by professionals that windows should be cleaned thoroughly after six months.

Here are some tips to brighten up your windows and homes.

#### Top to Bottom Cleaning technique

Professional window cleaners recommend this technique because it ensures that you do not leave streaks on your window.

#### Use an environmentally friendly cleaner

You can simply mix white vinegar and warm water. This is a safe and excellent window cleaning product recommended by window cleaners.

#### Hire a Professional to Work on tall windows

In most cases it is a good idea to hire a professional window cleaning service to handle the exterior part of tall windows.

#### Use protection for your floors

Cleaning windows can leave stains behind on your floor so you can protect your floors by using old newspaper.

#### Do Not Use Regular Cloth

It is best to use newspaper because it does not leave water stains behind when the window dries off.

If you're having two minds as to hiring a professional window cleaner, thinking you can save money by cleaning them yourself, make sure you have the basic understanding of the techniques and tools.
