# Master Key Systems

### Master Key Systems

At Omega Security Solutions, we're proud to say that high-security master key systems are one of our great strengths. In fact we are one of the largest suppliers of restricted master key systems in Australia with over 15,000 systems in operation.

For 40 years, we have been specialising in the design and manufacture of high security master key systems, combining the latest technology in restricted key profiles, key duplication, software and architectural door hardware.

Using our coding and strategic design expertise, we work closely with an array of architects, builders, suppliers and clients alike to provide optimum keying solutions across a broad range of specifications and criteria.

From one and two door retail shopfronts, to 1000 door sporting stadiums and 80 storey office buildings; rest assured that we can design a master keying solution for your premises. This knowledge, combined with our electronic security products and highly experienced staff, are your guarantee of comprehensive asset protection.

Creating large restricted mater key systems with high levels of complexity takes special skill. That's what Omega Security Solutions specialise in.

We are also able to offer Security Construction and Equipment Committee (SCEC) endorsed key systems for Government departments and agencies.

All of our master keying expertise is backed by a team of locksmiths available and on call 24 hours a day. Emergency service is only a phone call away.

Our Master Key Systems are also supported by the Omega Key Register Software. This is a dedicated key management software suite that allows you to keep track of all your keys.

We also offer Construction Keyed Master Key Systems to the building and construction industry. Construction Keying really helps keep your site secure and reduces costs! Learn more about Construction Keying [here](#).
