

What We Do

Green Edge. Custom Building Renovations

At Green Edge Builders we've earned a great reputation as innovative custom builders. For us, no two jobs are ever the same. We work closely with our clients to create a custom design and to build the right home for the right person. Whether it's a small renovation such as a new deck or outdoor entertaining area, a new kitchen or bathroom, a large extension to cater for a growing family, or a complete ground-up rebuild, we relish any challenge we undertake. Our enthusiastic approach to building means we always exceed our clients expectations. You can count on the highest quality from Green Edge Builders.

We love the challenge which comes with each new build and we never shy away from jobs which other builders often put into the "too hard" basket. Due to our personalised, custom approach we excel at jobs that the big volume builders often try to avoid. If you're looking to take an active interest in the construction of your new home then we might be the right builders for you. We always listen to what our clients want and come up with a build to suit them. We always try to keep away from the mainstream in favour of a customised approach. We understand that your home is the centre of your life and the heartbeat of your family. We also know that for the vast majority of Australians, it is often the biggest financial investment they'll ever make. With this in mind, we approach each new build with a great sense of responsibility, and a strong duty of care, from us to you. Attention to detail and careful consideration and planning are the hallmarks of our approach to building. This approach ensures that we achieve what you desire from your new home and leaves you with a sense of satisfaction. We feel the same way at the end of each job.

Design and construction is a great thrill for us, it is our passion and we do all we can to be at the leading edge of our field. As our name suggests, Green Edge Builders are also focused on building sustainable 'green' homes as well as employing environmentally sound building practices. This means that with every job we undertake, we're building for tomorrow, incorporating all of our existing knowledge on 'green' building practices into designing and building your new home. For more on our building practices please see the About Us page and the Environmental page.
