

AD Rogers Construction- Carpenters - South Penrith

Basic Carpentry Tools For Your DIY Projects

DIY can be an option for a homeowner with basic carpentry knowledge and have the time to indulge in DIY projects.

These basic carpentry tools are the most commonly used for any type of home improvement or repair project.

Hammer

When you think of hammers, nails automatically come to mind. If you're going to do a lot of hammering and nailing, be sure to protect your eyes with safety glasses.

Carpenter and Speed square

The square is one of the basic carpentry tools used for measuring or checking how big and flat a surface is. It is also used for making patterns over a wooden surface.

Tape Measure

The ideal tape measure is one which is inexpensive, flexible, and with a roll-back feature.

Tape measures may come in different types and styles, but they are only as reliable as how well you read them.

End Cutter

The end cutter is important because of the multiple uses it can perform.

Otherwise, a sharp razor-end utility knife can handle the cutting and trimming of materials like wood edge and twine.

Tool belt

All in one, you can have pockets and holders for an assortment of carpentry tools. In one handy piece, you have everything within reach.

The tool belt is also a big time-saver.

With your arsenal of basic carpentry tools, you will be quick and flexible in your response to different kinds of projects which need your attention.

When you need a professional and skilled carpenter to assist you with any home improvement project, you can rely on the skilled Carpenter of AD Rogers Construction in South Penrith. Call them today at 0403 589 952!
